Topic submission for final assignment

My concept for the final assignment is Library Management System. The system allows the Librarian to manage entire Library. Librarian can add and update new personnel maintaining security and can also issue, reserve and return books for particular student. Any books items can be added and deleted easily. The system makes the process more faster.

Technical functionality

- System can be logged in using username and password
- New user can be registered with their username and password.
- Books can be issued and deleted
- We can look for the book details according to the needs
- Librarian can update books
